Details pages in Etna

This diagram tries to illustrate the different types of details page that are to be represented in the open Beta. It borrows the representation of inheritance from UML Class Diagrams to illustrate those features which are present on all specialised pages.

Note: it is only those pages which have a thicker border and green background that will exist. All other pages are represented only to show components that are shared by instances. For example, 'Etna page' is the base for all other pages and includes those components that will be present in every page that inherits from it

Current questions

- Can piece and item share the same template, or is the metadata to be included sufficiently different to justify their separation?
- Will the open Beta include born digital records that are currently available in Discovery (such as the videos available under LEV1)? If so, how will these be handled?
- Will open Beta include bespoke searches at series level in the way that Discovery does?
- Will open Beta include Traces Through Time?
- Will open Beta include What to Expect guides?

Etna page
- Global search component
- Feedback mechanism
- Footer

All pages in Etna will include components shown on Etna page (Note that 'Header' is not included because this is not included in the image viewer or image browse pages)

Details page
- Header

Record details page
- Header
- Hierarchy
- Next / Previous / Parent navigation
- Related content (including Help and research guidance)
- Link to Archive details page

This links to the associated Archive details page within Etna
